DETAILED ACTION

Applicant's election without traverse of retrovirus in the reply filed on April 24,
 2010 is acknowledged.

Claims 1-9 and 11-21 are pending.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1, 2, 4, 5, 6, 8, and 11-21 are rejected under 35 U.S.C. 102(b) as being anticipated by Kiss et al. (Assay and Drug Dev. Tech., 2003).

Kiss et al. disclose Herg channel expressed in cells using pcDNA3.1 vector in a high throughput patch clamp system (page 128). The current is greater than 0.6 nA and the success rate is greater than 79% (figures 1-2; page 130). Table 1 disclose the results of inhibitor effects on the assay of channels (pages 128, 131-134; figures 4-5). The pcDNA3.1 comprises fragments of SV40, M13, CMV, and EBV virus and thus is not excluded as a viral vector. It should be noted that claims 1-7 are product claims and the product by process and function limitations are inherently taught by Kiss et al.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

3. Claims 1-9, 11-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kiss et al. (Assay and Drug Dev. Tech., 2003) in view of Morgenstern et al. (Nucleic acid research, 1990).

Teaching of Kiss et al. are discussed above. Kiss et al. does not teach a cell population transferred with a retrovirus vector.

Morganstern et al. disclose gene transfer with retrovirus vector (pages 3587-3589).

Application/Control Number: 10/595,858 Page 4

Art Unit: 1646

It would have been obvious to one of ordinary skill in the art at the time of the invention to express the herg channel of Kiss et al. using the retrovirus vector of Morganstern et al. One of ordinary skill in the art would have found it obvious to use the retrovirus vector because it was a well know vector and efficiently transferred as indicated by Morganstern et al. (page 3587, second column, second paragraph).

- 4. No claims are allowed.
- 5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael Pak whose telephone number is 571-272-0879. The examiner can normally be reached on 8:00 2:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gary Nickol can be reached on 571-272-0835. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
